🦎 MapLizard: Navigate the Unmapped

MapLizard is a dynamic, open-source mapping system designed to transform how we visualize, track, and interact with geographic environments. Built with a vision for rapid adaptation and seamless collaboration, MapLizard lets developers and innovators deploy, update, and scale spatial intelligence effortlessly via streamlined version control integrations.

Whether processing complex environmental topologies or building agile situational maps, MapLizard adapts like a chameleon to its surroundings—turning raw data points into highly interactive, visual terrain grids.

Key Highlights:

• Chameleon-Like Adaptability: Seamlessly conforms to diverse spatial data formats and project environments.

• Built for Builders: Engineered around a Git-native framework for rapid remote synchronization, smooth branching, and global collaboration.

• High-Fidelity Visuals: Translates multi-layer coordinates into highly scannable, intuitive digital grids.
